markpact

Live Contract Generation

PROMPT: custom

Build a todo API

Model: ollama/qwen2.5-coder:14b

0. Meta-Pipeline

Jak powstal ten dokument? human -> marksync -> LLM -> PDF

README.MD

````
# Meta-Pipeline: Jak powstal ten dokument?

Zanim powstal ten kontrakt, czlowiek uruchomil marksync:

```yaml markpact:orchestration
# Meta-pipeline generowania kontraktu
pipeline:
  name: marksync-report-generation
  steps:
    - name: user_request
      actor: human
      config:
        action: run_command
        command: marksync report

    - name: parse_intent
      actor: script
      config:
        tool: marksync.intent.IntentParser

    - name: generate_contract
      actor: llm
      config:
        model: ollama/qwen2.5-coder:14b
        prompt: user_request

    - name: enrich_orchestration
      actor: script
      config:
        tool: marksync.intent.YAMLGenerator

    - name: render_pdf
      actor: script
      config:
        tool: marksync.report.ReportPDF
```

Kazdy dokument marksync jest wynikiem wspolpracy:
  1. HUMAN - definiuje zamysl (prompt)
  2. SCRIPT - orkiestruje proces (marksync)
  3. LLM - generuje kontrakt
  4. SCRIPT - wzbogaca + renderuje PDF
````

WALIDACJA + OCZEKIWANIA

[Meta-Pipeline]

Aktorzy:

```
human  - uruchamia marksync
script - marksync CLI
llm    - generuje kontrakt
script - renderuje PDF
```

Przeplyw:

```
human -> marksync report
marksync -> IntentParser
marksync -> LLM (prompt)
LLM -> README.md
marksync -> YAMLGenerator
marksync -> ReportPDF
ReportPDF -> PDF output
```

Ten dokument to meta-refleksja: pokazuje proces wlasnego powstania.

# Todo API

A simple FastAPI-based Todo application that allows users to create, retrieve, update

## Features
- Create a new todo item
- Retrieve all todo items
- Update an existing todo item
- Delete a todo item

## API Endpoints
- POST /todos - Create a new todo item
- GET /todos - Retrieve all todo items
- PUT /todos/{id} - Update an existing todo item
- DELETE /todos/{id} - Delete a todo item

---

```yaml markpact:orchestration
pipeline:
  name: todo-api
  steps:
    - name: validate_input
      actor: script
    - name: ai_review
      actor: llm
    - name: human_approval
      actor: human
      config: {channel: web, timeout: 7200}
    - name: deploy
      actor: script
```

```json markpact:state
